

New ClimaTherm™

– not too hot, not too cold!

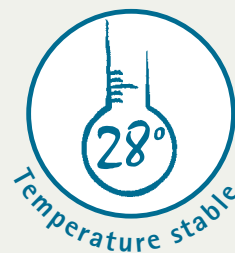

ALU REHAB™
Thinking ahead – moving forward

- Improved temperature regulation
- Higher elasticity
- Enhanced ventilation

Alu Rehab and Vital Base continue to improve their products in the fight against pressure sores. Research shows that the risk of developing pressure sores is considerably reduced by maintaining the skin's surface temperature at around 27°C. (Ref: EPUAP 2007 Allen Siekman, Paul A. Iazzo, PhD: Temperature Modulation of Pressure Ulcer Formation: Using a Swine Model (Wounds 16: 2004))

- New temperature-regulating textile ClimaTherm regulates the surface temperature to 28°C (previously 33°C).
- The temperature-regulating functions are integrated in a two-way elastic textile with good ventilation properties.
- New ClimaTherm is totally unique and offers the market an innovative solution fully in line with research environment indications.
- Production start in May 2008.
